

1. A compound comprising sulfenates having the formula,

Sub AS

wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin receptor binding molecules, neurotensin receptor binding molecules, bombesin receptor binding molecules, 10 cholecystekinin receptor binding molecules, steroid receptor binding molecules, and carbohydrate receptor binding molecules, and dihydroxyindolecarboxylic acid; L and X are independently selected from the group consisting of -(R⁵)NOC-, -(R⁵)NOCCH₂O-, -(R⁵)NOCCH₂CH₂O-, -OCN(R⁵)-, -HNC(=S)NH-, and HNC(=O)NH-; DYE is an aromatic or a heteroaromatic radical derived from the 15 group consisting of cyanines, indocyanines, phthalocyanines, rhodamines, phenoxazines, phenothiazines, phenoselenazines, fluoresceins, porphyrins, benzoporphyrins, squaraines, corrins, croconiums, azo dyes, methine dyes, indolenium dyes, crellins, and hypocrellins; R¹ to R⁵ are independently selected 20 from the group comprising hydrogen, C1-C10 alkyl, C5-C10 aryl, C1-C10 polyhydroxyalkyl, and C1-C10 polyalkoxyalkyl; and Ar is an aromatic or heteroaromatic radical derived from the group consisting of benzenes, naphthalenes, naphthoquinones, diphenylmethanes, fluorenes, anthracenes, anthraquinones, phenanthrenes, tetracenes, naphthacenediones, pyridines, quinolines, isoquinolines, indoles, isoindoles, pyrroles, imidazoles, oxazoles, 25 thiazoles, pyrazoles, pyrazines, purines, benzimidazoles, furans, benzofurans,

dibenzofurans, carbazoles, acridines, acridones, phenanthridines, thiophenes, benzothiophenes, dibenzothiophenes, xanthenes, xanthones, flavones, coumarins, and anthacylines.

2. The compound of claim 1 wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin receptor binding molecules, neuropeptide Y receptor binding molecules, bombesin receptor binding molecules, cholecystekinin receptor binding molecules, and 5 steroid receptor binding molecules; L and X are independently selected from the group consisting of -(R⁵)NOC-, and -(R⁵)NOCCH₂O -; DYE is derived from cyanines; R¹ to R⁵ are independently selected from the group consisting of hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar is an aromatic radical derived from benzene.

4. The compound of claim 1 wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin receptor binding molecules, neuropeptide Y receptor binding molecules, bombesin receptor binding molecules, cholecystekinin receptor binding molecules, and steroid receptor binding molecules; L and X are independently selected from the group consisting of -(R⁵)NOC-, and -(R⁵)NOCH₂O-; DYE is derived from rhodamines; R¹ to R⁵ are independently selected from the group consisting of hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar is an aromatic radical derived from benzene.
 5. The compound of claim 1 wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin receptor binding molecules, neuropeptide Y receptor binding molecules, bombesin receptor binding molecules, cholecystekinin receptor binding molecules, and steroid receptor binding molecules; L and X are independently selected from the group consisting of -(R⁵)NOC-, and -(R⁵)NOCH₂O-; DYE is derived from porphyrins; R¹ to R⁵ are independently selected from the group consisting of hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar is an aromatic radical derived from benzene.
 6. The compound of claim 1 wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin

- receptor binding molecules, neuropeptide Y receptor binding molecules, bombesin receptor binding molecules, cholecystekinin receptor binding molecules, and steroid receptor binding molecules; L and X are independently selected from the group consisting of -(R⁵)NOC-, and -(R⁵)NOCCH₂O -; DYE is derived from
- 5 benzoporphyrins; R¹ to R⁵ are independently selected from the group consisting of hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar is an aromatic radical derived from benzene.
7. The compound of claim 1 wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin receptor binding molecules, neuropeptide Y receptor binding molecules, bombesin receptor binding molecules, cholecystekinin receptor binding molecules, and steroid receptor binding molecules; L and X are independently selected from the group consisting of -(R⁵)NOC-, and -(R⁵)NOCCH₂O-; DYE is derived from corrins; R¹ to R⁵ are independently selected from the group consisting of hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar is an aromatic radical derived from benzene.
8. The compound of claim 1 wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin receptor binding molecules, neuropeptide Y receptor binding molecules, bombesin receptor binding molecules, cholecystekinin receptor binding molecules, and steroid receptor binding molecules; L and X are independently selected from the

group consisting of -(R⁵)NOC-, and -(R⁵)NOCCH₂O -; DYE is derived from pheothiazines; R¹ to R⁵ are independently selected from the group consisting of hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar is an aromatic radical derived from benzene.

9. The compound of claim 1 wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin receptor binding molecules, neurotensin receptor binding molecules, bombesin receptor binding molecules, cholecystekinin receptor binding molecules, and steroid receptor binding molecules; L and X are independently selected from the group consisting of -(R⁵)NOC-, and -(R⁵)NOCCH₂O -; DYE is derived from hypocrellins; R¹ to R⁵ are independently selected from the group consisting of hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar is an aromatic radical derived from benzene.
- 5 10. The compound of claim 1 wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin receptor binding molecules, neurotensin receptor binding molecules, bombesin receptor binding molecules, cholecystekinin receptor binding molecules, and steroid receptor binding molecules; L and X are independently selected from the group consisting of -(R⁵)NOC-, and -(R⁵)NOCCH₂O -; DYE is derived from fluoresceins; R¹ to R⁵ are independently selected from the group consisting of

cont

hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar is an aromatic radical derived from benzene.

11. The compound of claim 1 wherein E is associated with a biomolecule selected from the group consisting of hormones, amino acids, peptides, peptidomimetics, proteins, nucleosides, nucleotides, nucleic acids, enzymes, carbohydrates, glycomimetics, lipids, albumins, monoclonal antibodies, 5 polyclonal antibodies, receptors, inclusion compounds, receptor binding molecules, polyaminoacids, polyols, polyamines, polyacids, oligonucleotides, aborols, dendrimers, and aptamers.

12. A method of performing a phototherapeutic procedure which comprises the steps of:

(a) administering to a target tissue in an animal in an effective amount of sulfenate photosensitizers having the formula

5

10 wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin receptor binding molecules, neurotensin receptor binding molecules, bombesin receptor binding molecules, cholecystekinin receptor binding molecules, steroid receptor binding molecules, and carbohydrate receptor binding molecules, and dihydroxyindolecarboxylic acid; L and X are independently selected from the group consisting of $-(R^5)\text{NOC}-$, $-(R^5)\text{NOCCH}_2\text{O}-$, $-(R^5)\text{NOCCH}_2\text{CH}_2\text{O}-$, $-\text{OCN}(R^5)-$, $-\text{HNC}(=\text{S})\text{NH}-$, and $\text{HNC}(=\text{O})\text{NH}-$; DYE is an aromatic or a heteroaromatic radical derived from the group consisting of cyanines, indocyanines, phthalocyanines, rhodamines, phenoxazines, phenothiazines, phenoselenazines, fluoresceins, porphyrins, benzoporphyrins, squaraines, corrins, croconiums, azo dyes, methine dyes, indolenium dyes, crellins, and hypocrellins; R^1 to R^5 are independently selected from the group comprising hydrogen, C1-C10 alkyl, C5-C10 aryl, C1-C10 polyhydroxyalkyl, and C1-C10 polyalkoxyalkyl; and Ar is an aromatic or heteroaromatic radical derived from the group consisting of benzenes, naphthalenes, naphthoquinones, diphenylmethanes, fluorenes, anthracenes,

- Sub A6*
- anthraquinones, phenanthrenes, tetracenes, naphthacenediones, pyridines, quinolines, isoquinolines, indoles, isoindoles, pyrroles, imidazoles, oxazoles, thiazoles, pyrazoles, pyrazines, purines, benzimidazoles, furans, benzofurans, dibenzofurans, carbazoles, acridines, acridones, phenanthridines, thiophenes, 30 benzothiophenes, dibenzothiophenes, xanthenes, xanthones, flavones, coumarins, and anthacylines; and
(b) exposing said target tissues with the light of wavelength between 300 and 950 nm with sufficient power and fluence rate to cause necrosis or apoptosis of the said target tissue.

82 cont

13. The method of claim 12 further comprising the step of allowing said photosensitizer to accumulate in said target tissue.

- Sub A7*
14. The method of claim 12, wherein E is selected from the group consisting of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin receptor binding molecules, neuropeptide Y receptor binding molecules, bombesin receptor binding molecules, cholecystekinin receptor binding molecules, and 5 steroid receptor binding molecules; L and X are independently selected from the group consisting of -(R⁵)NOC-, and -(R⁵)NOCCH₂O-; DYE is derived from cyanines; R¹ to R⁵ are independently selected from the group consisting of hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar is an aromatic radical derived from benzene.

- receptor binding molecules, cholecystekinin receptor binding molecules, and
5 steroid receptor binding molecules; L and X are independently selected from the
group consisting of -(R⁵)NOC-, and -(R⁵)NOCCH₂O-; DYE is derived from
porphyrins; R¹ to R⁵ are independently selected from the group consisting of
hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar is
an aromatic radical derived from benzene.
18. The method of claim 12, wherein E is selected from the group consisting
of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin
receptor binding molecules, neuropeptid Y receptor binding molecules, bombesin
receptor binding molecules, cholecystekinin receptor binding molecules, and
5 steroid receptor binding molecules; L and X are independently selected from the
group consisting of -(R⁵)NOC-, and -(R⁵)NOCCH₂O-; DYE is derived from
benzoporphyrins; R¹ to R⁵ are independently selected from the group consisting
of hydrogen, C1-C10 alkyl, C5-C10 aryl, and C1-C10 polyhydroxyalkyl; and Ar
is an aromatic radical derived from benzene.
19. The method of claim 12, wherein E is selected from the group consisting
of somatostatin receptor binding molecules, heat sensitive bacterioendotoxin
receptor binding molecules, neuropeptid Y receptor binding molecules, bombesin
receptor binding molecules, cholecystekinin receptor binding molecules, and
5 steroid receptor binding molecules; L and X are independently selected from the
group consisting of -(R⁵)NOC-, and -(R⁵)NOCCH₂O-; DYE is derived from corrins;
